

CDAC MUMBAI

Concepts of Operating System

Assignment 2

Part A

What will the following commands do?

- `echo "Hello, World!"`

```
cdac@PratyushPC: /  
cdac@PratyushPC:/$ echo "Hello World"  
Hello World  
cdac@PratyushPC:/$
```

- `name="Productive"`

```
cdac@PratyushPC:/$ name="Productive"  
cdac@PratyushPC:/$ echo $name  
Productive  
cdac@PratyushPC:/$
```

- `touch file.txt`

```
cdac@PratyushPC: /home/Lin  
cdac@PratyushPC:/home/LinuxAssignment$ touch file.txt  
cdac@PratyushPC:/home/LinuxAssignment$ ls  
data.txt docs docsdir.zip duplicate.txt file.txt file1.txt fruit.txt input.txt newdocs numbers.txt output.txt  
cdac@PratyushPC:/home/LinuxAssignment$ |
```

- `ls -a`

```
cdac@PratyushPC: /  
cdac@PratyushPC:/$ ls -a  
. .. bin boot dev etc home init lib lib32 lib64 libx32 lost+found media mnt opt proc root run sbin snap srv sys usr var  
cdac@PratyushPC:/$
```

- rm file.txt

```
cdac@PratyushPC: /home/Lin × + v
cdac@PratyushPC:/home/LinuxAssignment$ ls
data.txt docs docsdir.zip duplicate.txt file.txt file1.txt fruit.txt input.txt newdocs numbers.txt output.txt
cdac@PratyushPC:/home/LinuxAssignment$ rm file.txt
cdac@PratyushPC:/home/LinuxAssignment$ ls
data.txt docs docsdir.zip duplicate.txt file1.txt fruit.txt input.txt newdocs numbers.txt output.txt
cdac@PratyushPC:/home/LinuxAssignment$ |
```

- cp file1.txt file2.txt

```
cdac@PratyushPC: /home/Lin × + v
cdac@PratyushPC:/home/LinuxAssignment$ ls
data.txt docs docsdir.zip duplicate.txt file1.txt fruit.txt input.txt newdocs numbers.txt output.txt
cdac@PratyushPC:/home/LinuxAssignment$ cp file1.txt file2.txt
cdac@PratyushPC:/home/LinuxAssignment$ ls
data.txt docs docsdir.zip duplicate.txt file1.txt file2.txt fruit.txt input.txt newdocs numbers.txt output.txt
cdac@PratyushPC:/home/LinuxAssignment$ |
```

- mv file.txt /path/to/directory/

```
cdac@PratyushPC: /home/Lin × + v
cdac@PratyushPC:/home/LinuxAssignment$ ls
docs file1.txt file2.txt
cdac@PratyushPC:/home/LinuxAssignment$ mv file2.txt docs

Part B

Identify True or False:

1. **ls** is used to list files and directories in a directory. - **True**
2. **mv** is used to move files and directories. - **True**
3. **cd** is used to copy files and directories. - **False** (cp is used to copy files & directories)
4. **pwd** stands for "print working directory" and displays the current directory. - **True**
5. **grep** is used to search for patterns in files. - **True**
6. **chmod 755 file.txt** gives read, write, and execute permissions to the owner, and read and execute permissions to group and others. - **True**
7. **mkdir -p directory1/directory2** creates nested directories, creating directory2 inside directory1 if directory1 does not exist. - **True**
8. **rm -rf file.txt** deletes a file forcefully without confirmation. - **False** (rm -rf is used for directories)

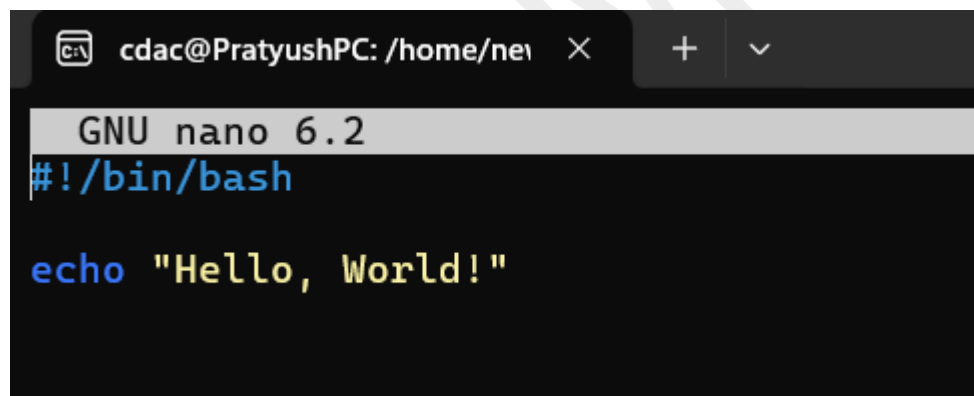

Identify the Incorrect Commands:

1. **chmodx** is used to change file permissions. (**chmod**)
2. **cpy** is used to copy files and directories. (**cp**)
3. **mkfile** is used to create a new file. (**touch/nano/vim**)
4. **catx** is used to concatenate files. (**cat**)
5. **rn** is used to rename files. (**mv**)

All Statements are incorrect

Part C

Question 1: Write a shell script that prints "Hello, World!" to the terminal.

```
cdac@PratyushPC: /home/nei
GNU nano 6.2
#!/bin/bash

echo "Hello, World!"
```

```
cdac@PratyushPC: /home/newdir × + ∨  
  
cdac@PratyushPC:/home$ ls  
LinuxAssignment cdac mydir newdir  
cdac@PratyushPC:/home$ cd newdir  
cdac@PratyushPC:/home/newdir$ nano first.sh  
cdac@PratyushPC:/home/newdir$ bash first.sh  
Hello, World!  
cdac@PratyushPC:/home/newdir$ |
```

Question 2: Declare a variable named "name" and assign the value "CDAC Mumbai" to it. Print the value of the variable.

```
cdac@PratyushPC: /home/newdir × + ∨  
  
GNU nano 6.2  
#!/bin/bash  
  
name="CDAC Mumbai"  
  
echo $name
```

```
cdac@PratyushPC: /home/newdir × + ∨  
  
cdac@PratyushPC:/home/newdir$ nano q2.sh  
cdac@PratyushPC:/home/newdir$ bash q2.sh  
CDAC Mumbai  
cdac@PratyushPC:/home/newdir$ |
```

Question 3: Write a shell script that takes a number as input from the user and prints it.

```
cdac@PratyushPC: /home/nei × + v
GNU nano 6.2
#!/bin/bash

echo "Enter a Number"
read num

echo "You entered: $num"
```

```
cdac@PratyushPC: /home/newdir × + v
cdac@PratyushPC:/home/newdir$ nano q3.sh
cdac@PratyushPC:/home/newdir$ bash q3.sh
Enter a Number
6
You entered: 6
cdac@PratyushPC:/home/newdir$ |
```

Question 4: Write a shell script that performs addition of two numbers (e.g., 5 and 3) and prints the result.

```
cdac@PratyushPC: /home/nei × + v
GNU nano 6.2
#!/bin/bash

num1=5
num2=3

result=$((num1+num2))

echo "Addition of 5 & 3 is: $result"
```

```
cdac@PratyushPC: /home/newdir$ nano q4.sh
cdac@PratyushPC: /home/newdir$ bash q4.sh
Addition of 5 & 3 is: 8
cdac@PratyushPC: /home/newdir$ |
```

Question 5: Write a shell script that takes a number as input and prints "Even" if it is even, otherwise prints "Odd".

```
GNU nano 6.2
#!/bin/bash

echo "Enter a Number:"

read num

if [ `expr $num % 2` == 0 ]
then
    echo "$num is even"
else
    echo "$num is odd"
fi
```

```
cdac@PratyushPC: /home/newdir$ nano q5.sh
cdac@PratyushPC: /home/newdir$ bash q5.sh
Enter a Number:
59
59 is odd
cdac@PratyushPC: /home/newdir$ |
```

Question 6: Write a shell script that uses a for loop to print numbers from 1 to 5.

```
cdac@PratyushPC: /home/nei × + v
GNU nano 6.2
#!/bin/bash

for n in {1..5};
do
    echo $n
done
```

```
cdac@PratyushPC: /home/newdir × + v
cdac@PratyushPC:/home/newdir$ nano q6.sh
cdac@PratyushPC:/home/newdir$ bash q6.sh
1
2
3
4
5
cdac@PratyushPC:/home/newdir$ |
```

Question 7: Write a shell script that uses a while loop to print numbers from 1 to 5.

```
cdac@PratyushPC: /home/nei × + v
GNU nano 6.2
#!/bin/bash

a=1
while [ $a -le 5 ]
do
    echo $a
    a=$((a+1))
done
```

```
cdac@PratyushPC: /home/newdir$ nano q7.sh
cdac@PratyushPC: /home/newdir$ bash q7.sh
1
2
3
4
5
cdac@PratyushPC: /home/newdir$ |
```

Question 8: Write a shell script that checks if a file named "file.txt" exists in the current directory. If it does, print "File exists", otherwise, print "File does not exist".

```
GNU nano 6.2
#!/bin/bash

if [ -f "file.txt" ]
then
    echo "File exists"
else
    echo "File does not exist"
fi
```

```
cdac@PratyushPC: /home/newdir$ nano q8.sh
cdac@PratyushPC: /home/newdir$ bash q8.sh
File does not exist
cdac@PratyushPC: /home/newdir$ ls
q1.sh q2.sh q3.sh q4.sh q5.sh q6.sh q7.sh q8.sh
cdac@PratyushPC: /home/newdir$ |
```

Question 9: Write a shell script that uses the if statement to check if a number is greater than 10 and prints a message accordingly.

```
cdac@PratyushPC: /home/nei × + v
GNU nano 6.2
#!/bin/bash

echo "Enter a Number"
read num

if [ "$num" -gt 10 ]; then
    echo "The number is greater than 10."
else
    echo "The number is not greater than 10."
fi|
```

```
cdac@PratyushPC: /home/newdir × + v
cdac@PratyushPC:/home/newdir$ nano q9.sh
cdac@PratyushPC:/home/newdir$ bash q9.sh
Enter a Number
4
The number is not greater than 10.
cdac@PratyushPC:/home/newdir$ |
```

Question 10: Write a shell script that uses nested for loops to print a multiplication table for numbers from 1 to 5. The output should be formatted nicely, with each row representing a number and each column representing the multiplication result for that number.

```
cdac@PratyushPC: /home/nei × + v
GNU nano 6.2
#!/bin/bash

echo -e "\t1\t2\t3\t4\t5"
echo "-----"
for i in {1..10};
do

    for j in {1..5}; do

        echo -ne "\t${(i * j)}"

    done

    echo
done
```

```
cdac@PratyushPC: /home/newdir × + v
cdac@PratyushPC:/home/newdir$ nano q10.sh
cdac@PratyushPC:/home/newdir$ bash q10.sh
      1      2      3      4      5
-----
      1      2      3      4      5
      2      4      6      8     10
      3      6      9     12     15
      4      8     12     16     20
      5     10     15     20     25
      6     12     18     24     30
      7     14     21     28     35
      8     16     24     32     40
      9     18     27     36     45
     10     20     30     40     50
cdac@PratyushPC:/home/newdir$ |
```

Question 11: Write a shell script that uses a while loop to read numbers from the user until the user enters a negative number. For each positive number entered, print its square. Use the **break** statement to exit the loop when a negative number is entered.

```
cdac@PratyushPC: /home/nei × + v
GNU nano 6.2
#!/bin/bash

while true;|
do

    echo "Enter a Number (Negative number to quit): "
    read number

    if [ "$number" -lt 0 ]; then
        echo "You enteres a negative number. Exiting"
        break
    else
        square=$((number * number))
        echo "The square of $number is $square"
    fi
done
```

```
cdac@PratyushPC: /home/nei × + v
cdac@PratyushPC:/home/newdir$ nano q11.sh
cdac@PratyushPC:/home/newdir$ bash q11.sh
Enter a Number (Negative number to quit):
4
The square of 4 is 16
Enter a Number (Negative number to quit):
5
The square of 5 is 25
Enter a Number (Negative number to quit):
-8
You enteres a negative number. Exiting
cdac@PratyushPC:/home/newdir$ |
```

Part D

Common Interview Questions (Must know)

1. What is an operating system, and what are its primary functions?
2. Explain the difference between process and thread.
3. What is virtual memory, and how does it work?
4. Describe the difference between multiprogramming, multitasking, and multiprocessing.
5. What is a file system, and what are its components?
6. What is a deadlock, and how can it be prevented?
7. Explain the difference between a kernel and a shell.
8. What is CPU scheduling, and why is it important?
9. How does a system call work?
10. What is the purpose of device drivers in an operating system?
11. Explain the role of the page table in virtual memory management.
12. What is thrashing, and how can it be avoided?
13. Describe the concept of a semaphore and its use in synchronization.
14. How does an operating system handle process synchronization?
15. What is the purpose of an interrupt in operating systems?
16. Explain the concept of a file descriptor.
17. How does a system recover from a system crash?
18. Describe the difference between a monolithic kernel and a microkernel.
19. What is the difference between internal and external fragmentation?
20. How does an operating system manage I/O operations?
21. Explain the difference between preemptive and non-preemptive scheduling.
22. What is round-robin scheduling, and how does it work?
23. Describe the priority scheduling algorithm. How is priority assigned to processes?
24. What is the shortest job next (SJN) scheduling algorithm, and when is it used?
25. Explain the concept of multilevel queue scheduling.
26. What is a process control block (PCB), and what information does it contain?
27. Describe the process state diagram and the transitions between different process states.
28. How does a process communicate with another process in an operating system?
29. What is process synchronization, and why is it important?
30. Explain the concept of a zombie process and how it is created.
31. Describe the difference between internal fragmentation and external fragmentation.
32. What is demand paging, and how does it improve memory management efficiency?
33. Explain the role of the page table in virtual memory management.
34. How does a memory management unit (MMU) work?
35. What is thrashing, and how can it be avoided in virtual memory systems?
36. What is a system call, and how does it facilitate communication between user programs and the operating system?
37. Describe the difference between a monolithic kernel and a microkernel.
38. How does an operating system handle I/O operations?
39. Explain the concept of a race condition and how it can be prevented.

40. Describe the role of device drivers in an operating system.
41. What is a zombie process, and how does it occur? How can a zombie process be prevented?
42. Explain the concept of an orphan process. How does an operating system handle orphan processes?
43. What is the relationship between a parent process and a child process in the context of process management?
44. How does the fork() system call work in creating a new process in Unix-like operating systems?
45. Describe how a parent process can wait for a child process to finish execution.
46. What is the significance of the exit status of a child process in the wait() system call?
47. How can a parent process terminate a child process in Unix-like operating systems?
48. Explain the difference between a process group and a session in Unix-like operating systems.
49. Describe how the exec() family of functions is used to replace the current process image with a new one.
50. What is the purpose of the waitpid() system call in process management? How does it differ from wait()?
51. How does process termination occur in Unix-like operating systems?
52. What is the role of the long-term scheduler in the process scheduling hierarchy? How does it influence the degree of multiprogramming in an operating system?
53. How does the short-term scheduler differ from the long-term and medium-term schedulers in terms of frequency of execution and the scope of its decisions?
54. Describe a scenario where the medium-term scheduler would be invoked and explain how it helps manage system resources more efficiently.

Part E

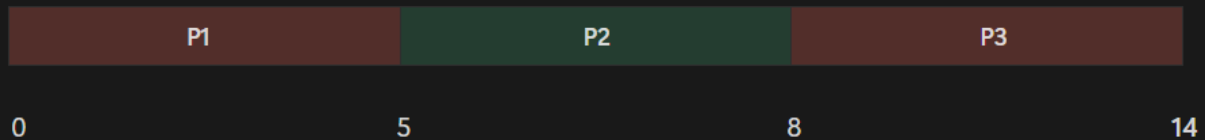

1. Consider the following processes with arrival times and burst times:

Process	Arrival Time	Burst Time
P1	0	5
P2	1	3
P3	2	6

Calculate the average waiting time using First-Come, First-Served (FCFS) scheduling.

First Come First Serve - (FCFS) Scheduling

Process	Arrival Time	Burst Time	Completion Time	Waiting Time	TAT = CT - AT
P1	0	5	5	0	5
P2	1	3	8	4	7
P3	2	6	14	6	12

Waiting time = Time when process gets CPU - Time when process arrived

✓ Average Waiting Time: $(0+4+6) / 3 = 10/3 = 3.33$

✓ Average Turnaround Time: $(5+7+12) / 3 = 24/3 = 8$

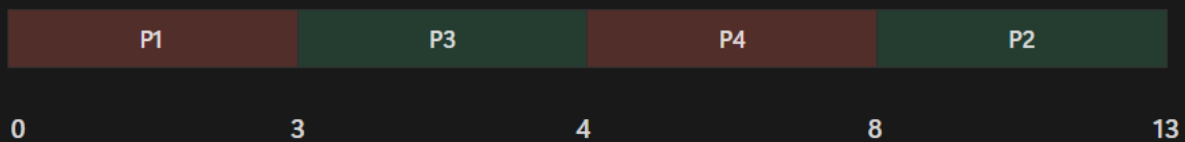

2. Consider the following processes with arrival times and burst times:

Process	Arrival Time	Burst Time
P1	0	3
P2	1	5
P3	2	1
P4	3	4

Calculate the average turnaround time using Shortest Job First (SJF) scheduling.

Shortest Job First - (SJF) Scheduling

Process	Arrival Time	Burst Time	Completion Time	Waiting Time	TAT = CT - AT
P1	0	3	3	0	3
P2	1	5	8	7	12
P3	2	1	9	1	2
P4	3	4	13	1	5

✓ Average Waiting Time: $(0+7+1+1) / 4 = 9/4 = 2.25$

✓ Average Turnaround Time: $(3+12+2+5) / 4 = 22/4 = 5.5$

3. Consider the following processes with arrival times, burst times, and priorities (lower number indicates higher priority):

Process	Arrival Time	Burst Time	Priority
P1	0	6	3
P2	1	4	1
P3	2	7	4
P4	3	2	2

Calculate the average waiting time using Priority Scheduling.

Priority Scheduling

Process	Arrival Time	Burst Time	Priority	CTime	WTime	TAT = CT - AWT
P1	0	6	3	6	0	6
P2	1	4	1	10	5	9
P3	2	7	4	19	10	17
P4	3	2	2	12	7	9

0 6 10 12 19

✓ Average Waiting Time: $(0+5+10+7) / 4 = 22/4 = 5.5$

✓ Average Turnaround Time: $(6+9+17+9) / 4 = 41/4 = 10.25$

4. Consider the following processes with arrival times and burst times, and the time quantum for Round Robin scheduling is 2 units:

| Process | Arrival Time | Burst Time |

|-----|-----|

| P1 | 0 | 4 |

| P2 | 1 | 5 |

| P3 | 2 | 2 |

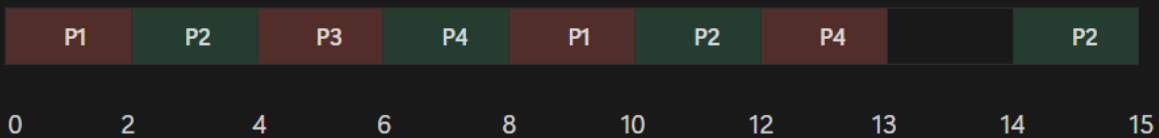

| P4 | 3 | 3 |

Calculate the average turnaround time using Round Robin scheduling.

Round-Robin Scheduling

Time Quantum = 2 units (Assuming Idle Time)

Process	Arrival Time	Burst Time	CTime	WTime	TAT = CT - AT
P1	0	4	10	0+6 = 6	10
P2	1	5	15	1+6+2 = 9	14
P3	2	2	6	2	4
P4	3	3	13	3+4 = 7	10

✓ Average Waiting Time: $(6+9+2+7) / 4 = 24/4 = 6$

✓ Average Turnaround Time: $(10+14+4+10) / 4 = 38/4 = 9.5$

5. Consider a program that uses the **fork()** system call to create a child process. Initially, the parent process has a variable **x** with a value of 5. After forking, both the parent and child processes increment the value of **x** by 1.

What will be the final values of **x** in the parent and child processes after the **fork()** call?

x = 5 in the parent process.

When **fork()** is called:

It creates a child process.

Both parent and child processes get their own copy of **x = 5.**

After **fork()** / Final Values:

Parent process: **x = 5 + 1 = 6**

Child process: **x = 5 + 1 = 6**

Submission Guidelines:

- Document each step of your solution and any challenges faced.
- Upload it on your GitHub repository

Additional Tips:

- Experiment with different options and parameters of each command to explore their functionalities.
- This assignment is tailored to align with interview expectations, CCEE standards, and industry demands.
- If you complete this then your preparation will be skyrocketed.
